

Q5(b)(i) mentions "solenoid" - describes apparatus with a solenoid and iron nail. This is about investigating how the size of the current in the solenoid affects the force of attraction between the solenoid and the iron nail. This is EXPLICITLY about solenoids.

Q5 mentions "wire" and magnetic fields but no explicit solenoid questions

Q5(c) mentions "metal rods" but not solenoid

Q7 mentions "coil" but in context of electromagnetic induction, not solenoid specifically

From jun-2018 | Page 16 (which shows pages 15-17, and this is from Q5 part b):

Q5(b)(i): "When the current in the solenoid is switched on, the solenoid attracts the iron nail. Describe how the student could use this apparatus to investigate how the size of the current in the solenoid affects the force of attraction between the solenoid and the iron nail."

From jun-2018 | Page 16:

Q5(b)(i): "When the current in the solenoid is switched on, the solenoid attracts the iron nail. Describe how the student could use this apparatus to investigate how the size of the current in the solenoid affects the force of attraction between the solenoid and the iron nail."
