

From jun-2018 | Page 10:

Q4(a)(i): Explain how rubbing the comb with a dry cloth gives the comb a positive electric charge.

Q4(a)(ii): Explain how the positively-charged plastic comb picks up the small pieces of paper.

From jun-2018 | Page 11:

Q4(b): Which of these diagrams shows the shape and direction of the electric field around a positive point charge?

From jun-2018 | Page 12:

Q4(c)(i): Explain, in terms of electric fields, why a force is exerted on sphere B.

From jun-2019 | Page 2:

Q1(a)(ii): Explain how charging the paint drops changes the shape of the spray pattern.

From jun-2019 | Page 3:

Q1(b): On Figure 3, draw the electric field lines between the two plates and show the direction of this electric field.

From jun-2020 | Page 13:

Q4(b)(iii): On Figure 10, draw lines to show the shape and direction of the electric field between the metal disc and the plastic block.

From jun-2022 | Page 2:

Q1(a): Draw on Figure 1 the shape and direction of the electric field due to the positive point charge.

Q1(b): Explain how the ruler becomes positively charged.

From jun-2022 | Page 3:

Q1(c): Explain how charging the droplets helps to make sure that the leaf gets covered with insecticide. You may add to Figure 2, including the sign (+ or –) of any charges, to help your answer.

From jun-2023 | Page 2:

Q1(a)(ii): Explain why the cloth has become negatively charged.

From jun-2023 | Page 3:

Q1(c): Draw the charges induced on the dust particle in Figure 2.

From june-2024 | Page 2:

Q1(b): Give the meaning of the term electric field.

From june-2024 | Page 3:

Q1(c)(i): State how Figure 2 gives evidence that the point charge is positive.

Q1(c)(ii): In Figure 2, x is the distance from the point charge. State how Figure 2 gives evidence that the electric field strength decreases as x increases.

From nov-2021 | Page 4:

Q1(c)(i): Use information from Figure 3 to give two differences between the charge on P and the charge on Q.

Q1(c)(ii): Object P and object Q are held near to each other so that their electric fields interact with each other. State the effect that the electric field of object Q has on object P.

From specimen | Page 14:

Q4(c): Explain how charging the door helps the paint to form an even coating on both sides of the door. You should use ideas of forces and fields in your answer.
