

### **From \*\*jun-2018\*\* | Page 28:**

Q9(a): "Which of these could be the output for a dynamo?"

### **From \*\*jun-2019\*\* | Page 16-17:**

Q6(a)(i): "Draw a diagram to show how the teacher should arrange the apparatus [bar magnet, coil of wire, sensitive voltmeter]"

Q6(a)(ii): "Explain how the teacher could use this apparatus to demonstrate the factors affecting the size and direction of the induced potential difference"

### **From \*\*jun-2020\*\* | Page 22:**

Q7(a): "Which row of the table shows the deflection on the milliammeter for the three stages in Figure 15?" [magnet moving into coil, stationary, moving out]

Q7(a)(ii): "Give two ways of increasing the deflections on the milliammeter"

### **From \*\*jun-2022\*\* | Page 30-31:**

Q10(a): "Explain what will be observed on the meter when the magnet is pushed in and pulled out of the coil, repeatedly"

### **From \*\*jun-2023\*\* | Page 30-31:**

Q10(a): "The dynamo contains a coil of wire that can spin inside a permanent magnet. The dynamo produces a D.C. output... Explain what will be observed on the meter when the magnet is pushed in and pulled out of the coil, repeatedly."

Q10(c): Comparison of loudspeaker and microphone

### **From \*\*jun-2024\*\* | Page 32:**

Q10(a)(i): "Explain why the voltmeter shows a reading as the magnet passes through the coil"

Q10(a)(ii): "Describe how the student could use the arrangement in Figure 23 to do this investigation" [how reading depends on height magnet dropped from]

Q10(b)\*: Transformer explanation

### **From \*\*nov-2021\*\* | Page 26-29:**

Q9(a)(ii): "Explain how an alternating current in the primary coil causes an alternating current in the secondary coil of the transformer"

Q9(c)\*: "Explain why the current changes in the way shown by the graph in Figure 20" [coil rotating between magnets - alternators]

### **From \*\*specimen\*\* | Page 26:**

Q7(c): "Explain which of the voltages in Figures 21 and 22 cause an a.c. current in the wire"

### **From jun-2018 | Page 28:**

Q9(a): "Which of these could be the output for a dynamo?"

### **From jun-2019 | Page 16-17:**

Q6(a)(i): "Draw a diagram to show how the teacher should arrange the apparatus [bar magnet, coil of wire, sensitive voltmeter]"

Q6(a)(ii): "Explain how the teacher could use this apparatus to demonstrate the factors affecting the size and direction of the induced potential difference"

### **From jun-2020 | Page 22:**

Q7(a): "Which row of the table shows the deflection on the milliammeter for the three stages in Figure 15?"

Q7(a)(ii): "Give two ways of increasing the deflection on the milliammeter"

### **From jun-2022 | Page 30-31:**

Q10(a): "Explain what will be observed on the meter when the magnet is pushed in and pulled out of the coil, repeatedly"

### **From jun-2023 | Page 30-31:**

Q10(a): Dynamo question with different rotation speeds

Q10(c)\*: "Compare how the device operates when used as a loudspeaker with how the device operates when used as a microphone"

### **From jun-2024 | Page 32-33:**

Q10(a)(i): "Explain why the voltmeter shows a reading as the magnet passes through the coil"

Q10(a)(ii): "Describe how the student could use the arrangement in Figure 23 to do this investigation"

Q10(b)\*: Transformer explanation

### **From nov-2021 | Page 26-29:**

Q9(a)(ii): "Explain how an alternating current in the primary coil causes an alternating current in the secondary coil of the transformer"

Q9(c)\*: "Explain why the current changes in the way shown by the graph in Figure 20" [coil rotating between magnets - this is about alternators, directly matching syllabus .3P]

### **From specimen | Page 26:**

Q7(c): "Explain which of the voltages in Figures 21 and 22 cause an a.c. current in the wire"

### **From \*\*jun-2018\*\* | Page 28:**

Q9(a): "Which of these could be the output for a dynamo?"

### **From \*\*jun-2019\*\* | Page 16-17:**

Q6(a)(i): "Draw a diagram to show how the teacher should arrange the apparatus [bar magnet, coil of wire, sensitive voltmeter]"

Q6(a)(ii): "Explain how the teacher could use this apparatus to demonstrate the factors affecting the size and direction of the induced potential difference"

### **From \*\*jun-2020\*\* | Page 22:**

Q7(a): "Which row of the table shows the deflection on the milliammeter for the three stages in Figure 15?" [magnet moving into coil, stationary, moving out]

Q7(a)(ii): "Give two ways of increasing the deflections on the milliammeter shown in Figure 16"

**From \*\*jun-2022\*\* | Page 30:**

Q10(a): "Explain what will be observed on the meter when the magnet is pushed in and pulled out of the coil, repeatedly"

**From \*\*jun-2023\*\* | Page 30-31:**

Q10(a): "The dynamo produces a D.C. output... Which row of the table shows how the rotation of the handle has changed between (a) and (b)?"

**From \*\*jun-2024\*\* | Page 32:**

Q10(a)(i): "Explain why the voltmeter shows a reading as the magnet passes through the coil"

Q10(a)(ii): "Describe how the student could use the arrangement in Figure 23 to do this investigation"

**From \*\*nov-2021\*\* | Page 26:**

Q9(a)(ii): "Explain how an alternating current in the primary coil causes an alternating current in the secondary coil of the transformer"

**From \*\*nov-2021\*\* | Page 28-29:**

Q9(c): "Explain why the current changes in the way shown by the graph in Figure 20" [coil rotating between poles of magnet - alternators]

**From \*\*specimen\*\* | Page 26:**

Q7(c): "Explain which of the voltages in Figures 21 and 22 cause an a.c. current in the wire"
