

From jun-2018 | Page 28:

Q9(a): Which of these could be the output for a dynamo?

From jun-2020 | Page 22:

Q7(a)(i): Which row of the table shows the deflection on the milliammeter for the three stages in Figure 15?

Q7(a)(ii): Give two ways of increasing the deflections on the milliammeter shown in Figure 16.

From jun-2022 | Page 30:

Q10(a): Explain what will be observed on the meter when the magnet is pushed in and pulled out of the coil, repeatedly.

From jun-2023 | Page 23:

Q8(a)(iii): The electrical device is used as a motor when the car accelerates and as a dynamo when the car decelerates. Explain how using the device can help to increase the time that the car can be driven before the battery becomes discharged.

From jun-2023 | Page 30:

Q10(a)(i): Which row of the table shows how the rotation of the handle has changed between (a) and (b)?

Q10(a)(ii): The teacher connects the dynamo to a lamp. It is now more difficult for the teacher to rotate the handle. Explain why it is more difficult to turn the dynamo when it is connected to a lamp.

From june-2024 | Page 32:

Q10(a)(i): Explain why the voltmeter shows a reading as the magnet passes through the coil.

Q10(a)(ii): A student develops this investigation to find out how the reading on the voltmeter depends on the height the magnet is dropped from. Describe how the student could use the arrangement in Figure 23 to do this investigation.

From nov-2021 | Page 28:

Q9(c): Explain why the current changes in the way shown by the graph in Figure 20. Your answer should include details of the position of the coil relative to the magnet at each of the times labelled P, Q, R, S and T.
